

Cookies & Privacy (pwi-e.com)

Plain-English summary. Last updated: June 26, 2026.

IN 30 SECONDS

- **Cookies** are small browser notes (e.g. “already answered the popup,” language choice).
- **Privacy** covers form data (quotes, contact, newsletter) plus basic server logs when people browse.
- We **do not sell** visitor data.
- **Analytics** runs only if the visitor accepts optional cookies.
- **X on the popup = Reject all cookies** (optional tracking stays off; choice is saved).

THE COOKIE POPUP

First visit (or after clearing browser data), a banner appears bottom-left:

Action	Result
Accept all cookies	Analytics (+ marketing category) enabled; Google Analytics can collect aggregated usage stats.
Reject all cookies	Only essential cookies; no analytics tracking. Site works normally.
Cookie settings	Pick categories individually, then Save my choices .
X (close)	Same as reject – optional cookies off, choice remembered.

Note: Reject = no optional tracking; essential storage (remembering their choice) and server logs still apply.

This is **cookie consent only**, not agreement to Terms & Conditions.

COOKIE TYPES

Type	When it runs
Necessary	Always – remembers cookie choice, core site function.
Analytics	Only if accepted – pages visited, session length, traffic sources (aggregated).
Marketing	Listed for future use; not active today .
Functional	Only if visitor uses the language picker (Google Translate cookies).

Until analytics is accepted, Google Consent Mode keeps analytics storage **disabled**.

DEEP DIVE: WHAT GETS STORED AND TRACKED

1. Cookie choice – visitor’s browser

Where: `localStorage` key `pwi_cookie_consent` (browser storage, not a cookie file). Stays until the visitor clears site data or we change the policy version.

Fields saved:

Field	Example	Notes
<code>version</code>	<code>1.1</code>	Policy version; banner reappears if this changes
<code>timestamp</code>	ISO date/time	When they clicked Accept, Reject, X, or Save
<code>necessary</code>	<code>true</code>	Always true – essential cookies stay on
<code>analytics</code>	<code>true</code> / <code>false</code>	Google Analytics allowed or blocked
<code>marketing</code>	<code>true</code> / <code>false</code>	Ad-related consent flag (no active marketing cookies today)

No name, email, or phone – only yes/no flags.

Written when: Accept all, Reject all, X close, Save my choices, or Reject all in settings.

2. Google Analytics (only if analytics accepted)

Service: Google Analytics property `G-PFX0VN5076` . Data lives in Google's systems (aggregated reports).

Before accept: Analytics/ad storage is **denied** on every page. GA script loads but should not set persistent analytics cookies until consent is granted.

After accept: Browser may get Google cookies (`_ga` , `_gid` , etc.). Google may record pages viewed, session length, rough location (city/region), device/browser type, and referral source. This is **statistical** – not linked to form submissions in our site code.

Marketing flag: If marketing is also accepted, ad-related consent flags go to Google – but no marketing cookies are in active use today.

3. QR product pages (only if analytics accepted)

When: Visitor lands on a `qr-*.html` page (from a product QR code) and `analytics` is `true` in `pwi_cookie_consent` .

What's sent: One GA event `qr_scan` with the product name (e.g. `pilatus-pc-12-led-cabin`) from the page's `data-qr-product` attribute.

Purpose: See which QR-linked products get scans – aggregated in GA, not tied to identity unless they also submit a form.

4. Internal consent log (optional – OFF today)

Where: Would be a **Google Sheet** owned by PWI, via Apps Script web app URL in `tailwind_theme/privacy-config.js` (`logEndpoint`).

Status: `logEndpoint` is **empty** – nothing is logged to a sheet right now.

If enabled, each consent action would append one row:

Column	Content
Timestamp	When they clicked
Page	Full URL they were on
Analytics	true / false
Marketing	true / false

Still **no name or email** – compliance audit trail only.

5. Web server logs (every visit)

Where: PWI hosting server.

Typical log entry: IP address, date/time, page requested, browser/OS (User-Agent), referrer if sent.

Search: Queries appear in the URL (`search.html?q=...`) and may appear in server logs. Search runs **in the browser** (Fuse.js + local index) – PWI does not run a separate search database.

6. Newsletter shortcut (homepage only)

Where: `sessionStorage` – temporary, same browser tab only.

Keys: `pwi_newsletter_email`, `pwi_newsletter_from`

Flow: Homepage email field → brief storage → redirect to newsletter signup → signup page reads and **removes** keys. Cleared when the tab closes. Not long-term storage like cookie consent.

7. Language picker (optional)

Where: Google Translate cookies (e.g. `googttrans`) in the visitor's browser.

When: Only if they use the **language** menu. Google may process page text to translate. Using English only avoids this.

8. Forms (separate from cookies)

Where: PWI server/backend on submit – **not** stored by the cookie banner.

Form	Server endpoint	Data submitted
General inquiry	<code>/general-inquiry-request</code>	Name, email, phone, company, inquiry type, product, message, how they heard about us
Quote request	<code>/aviation-lighting-information-request</code>	Same plus aircraft/model and part details
Newsletter	<code>/signup-request</code>	Name, email, phone (optional), product interests

This is **real personal information** for sales, support, and newsletters. Cookie consent and form submission are separate.

WHO CAN SEE WHAT?

Example...	From...
"120 visits to quote page last week"	Google Analytics (if visitor accepted)
"15 QR scans for Pilatus product"	GA qr_scan events (if accepted)
"Visitor rejected cookies at 2pm on /contact"	Google Sheet (only if logging enabled)
"IP requested /search.html?q=king+air"	Server logs
"Name, email, and quote details from a form"	Form submission / email / CRM

ALSO KNOW: VISITOR RIGHTS & CONTACTS

Covered in the [Privacy Statement](#), not the cookie banner:

- **Privacy requests:** Email privacy@pwi-e.com for access, correction, or deletion. Footer link **Privacy Request** goes to the same process.
- **Response times:** Generally within **30 days**; California (CCPA) requests within **45 days**.
- **Not everything can be deleted:** Aviation/order and transaction records must be kept for legal, regulatory, and warranty reasons even if someone requests deletion.
- **Newsletter opt-out:** Unsubscribe link in emails, or contact sales@pwi-e.com — separate from cookie settings.
- **Children:** B2B site; we do not knowingly collect data from children under 13.
- **Data breaches:** Privacy Statement describes investigation, notification, and regulatory reporting (including GDPR 72-hour reporting where applicable).

ALSO KNOW: LEGAL & BROWSER SIGNALS

- **Do Not Track (DNT):** Some browsers send a "don't track me" signal. The site **does not change** data collection based on DNT — only the cookie banner and browser cookie settings matter.
- **International visitors:** The site is operated from the **United States**. Google Analytics and Google Translate may involve data processed outside the visitor's country under Google's policies (EU-U.S. Data Privacy Framework, etc.).

ALSO KNOW: OTHER THIRD PARTIES

Service	When	Notes
jsDelivr	Search page loads Fuse.js library	Network request only; does not set PWI cookies
Google Maps	Footer address link	Outbound click to Google — not an embedded map on our site
Email marketing provider	Newsletter sign-ups	Holds mailing-list data (see Privacy Statement service providers)
Hosting provider	Every visit and form POST	Server logs and form handling

Not on the site: No Facebook/Meta pixel, Hotjar, Microsoft Clarity, HubSpot tracking, embedded YouTube, embedded maps, or payment processing on the website.

ALSO KNOW: TECHNICAL NUANCES

- **GA loads on every page** before consent, but analytics **storage stays denied** until accept (Google Consent Mode). The browser still connects to Google's servers.
- **Consent Mode defaults:** `functionality_storage` and `security_storage` are **granted** by default (Google's own categories – separate from the analytics toggle).
- **Policy version 1.1 :** If we bump the version in code, the banner **reappears** and old consent is **not applied** to analytics. The old browser record may remain until overwritten.
- **Form honeypot:** Inquiry, quote, and newsletter forms include a hidden `website` field – spam bots that fill it are flagged server-side; not visitor tracking.
- **Search page:** Marked `noindex` (not meant for Google indexing). Search terms still appear in the URL and may appear in server logs.

ALSO KNOW: OPERATIONS

1. **Consent audit log is OFF** – `logEndpoint` in `tailwind_theme/privacy-config.js` is empty. Enable via `consent-logger.gs` + Google Sheet if you want a compliance trail.
2. **Marketing toggle** is in settings but **no marketing cookies run today** – “Accept all” enables analytics and sets marketing consent flags in Google (no marketing cookies active yet).
3. **Form backends** (`/general-inquiry-request`, etc.) run on the **live server** – who sees submissions, CRM, and retention depend on that setup (not in this website repo).
4. **Forms only submit on the live site** – local `file:///` preview shows a warning and blocks submit.

PRIVACY SUMMARY

We do **not** sell or rent personal information for third-party marketing. No payment cards on the website.

CHANGING A CHOICE LATER

Footer link **Cookie Settings** reopens preferences anytime.

Full policies: [Cookie Policy](#) • [Privacy Statement](#)

ONE-LINER SUMMARY

Essential cookies always; analytics only with consent; no data sales; form data used for business follow-up only.
