PWI LED 'Logo Light' Gains FAA PMA Certification For King Air And Citations

October 11, 2023 – Wichita, KS -- PWI announces the recent FAA PMA approval for the LED Logo Light for Beechcraft King Air 90, 200, 300, B300/350; and the Beech 1900 C/D models. Additionally, two of these same lights are used by the Cessna Citation X 750 as Wing Inspection Lights. PWI's new LED boasts as many service hours as 625 bulbs.

Illuminating the vertical tail surface in the Beech aircraft, this new LED floodlight highlights a company logo and/or slogan, often painted on the tail. The powerful 5,000K color temperature LED improves night visibility, provides long life, accurate color illumination and improved light output with lower heat. The Citation X 750 benefits from the higher light output by illuminating the leading edge and top surface of the wing - assisting in ice formation discovery.

PWI LED Logo Light replaces the A70828 bulb in Beechcraft aircraft and the 34A0228070-67 light in the Citation X 750.

The LED Logo Light is not only about business and fleet marketing (markings for charter, special missions such as Airmed, as well as commercial and cargo aircraft), it also enhances safety. Visibility during taxi maneuvers as well as during takeoff and landing are made safer. It also helps the ATC personnel identify an aircraft on the ground, and then to supply directional instructions to other aircraft in proximity.

PMA-Approved Aircraft

Beechcraft King Air C90, C90A, C90GT, C90GTi, E90, 200, 200T, 200C, 200CT, B200, B200T, B200C, B200CT, B200GT, B200CGT, 300, 300LW, B300, B300C, Beechcraft 1900 C and D models;

Cessna Citation X 750 (mounted in the fuselage and used as Wing Inspection Lights).

The PWI LED Logo Light includes the LED light, light socket, reflector, and pivoting adjustment bracket. These new parts eliminate any preexisting corrosion that could affect the performance of the new light over its extended lifespan. Original aircraft wiring is used without modification.

Replacing the 160-hour life A70828 halogen bulb, the PWI LED light offers 100,000 operational hours – saving 625 bulb replacements over the life of the LED. The 3-LED design also produces 1600 Lumens, which is 600 more than the 3,000K halogen bulb. The PWI LED requires only 11 watts while the bulb uses 50.4 watts and draws 4.5 times less amps, generating less than half the heat and preserving the floodlight lens. The PWI LED was tested and passed DO-160G vibration testing.

PWI Part Number: 7310050-000

PMA: PQ4159CE, Supplement 32

Warranty: 3 years

Halogen Bulbs Replaced: A70828, A708-28, LP1982SP (King Air and 1900) and
34A0228070-67 (Citation X 750)

"PWI has applied LED technology to many Beech King Air lighting challenges and this new LED tail floodlight addresses visual branding, aircraft visibility and thus mission safety," said Robi Lorik, PWI CEO and President. "It also makes viewing the aircraft from the FBO and out on a crowded ramp easier, and I know our charter and armed customers will appreciate that. And no bulb beats our LEDs for long service life," Lorik continued.

PWI is the OEM for most King Air interior lighting, extending a decades long history of OEM lighting fluorescent lights for business jets. Aviation products can be purchased through our growing authorized dealer network. For more information, contact PWI at +1-316-942-2811 or contact our sales counselors, at sales@pwi-e.com.
