**PWI Expands LED Ice Light Product Line
With New Threaded Mount Version
PMA Approved in Beechcraft and Cessna Piston, Turboprops and Jets**

April 10, 2023 – Wichita, KS – PWI has expanded the already-PMA approved bayonet mount LED Ice Light product and is now offering a new PMA-approved version which features a threaded mount.

This product illuminates the leading edge of the wing to aid in detecting ice formation. Installed on the engine pylons on a Citation, it fulfills floodlight duties for service work. The light performance has received much positive feedback relating to light output and longevity.

Owner/operators have found that the aircraft bayonet light socket can be prone to corrosion. By removing the light socket entirely, the PWI Threaded LED Ice Light can be installed directly to the aircraft light bracket. The heavy threads on the base of the LED light secure it to the aircraft, and also allow for the installed light to be easily aimed at the cover window – a necessary step for any light replacement. Once the light is aimed, the supplied nuts and washers secure it to the aircraft. Connecting the two wires on the LED light to the two wires that formerly supplied power to the bayonet light socket completes the simple installation.

-MORE-

The Threaded LED Ice Light is PMA-approved for: **Beechcraft** 55, 58 Barons; 99 Airliner, King Air 90 series, 100 series, 200 series, 300 series; Hawker/Beechjet 400 and 400A. Also approved are the **Cessna** 441 Conquest II, 208 and 208B Caravan turboprops and Citation 525 series, 550 Bravo, 560, 560XL, 650 series and 680 jets. The Citations use four lights per aircraft – two wing ice lights and two Pylon Flood Lights near the engines. The King Air turboprops can also replace aging ice light windows with the PWI PMA-approved Ice Light Window for a complete safety upgrade.

PWI continues to manufacture the bayonet mount LED Ice Light for those owner/operators who prefer to retain the original bulb light socket, as well as those who do not have a light socket with corrosion.

Product Specifications

Up to 100,000 hour service life;

730 Lumens (more light than the replaced bulb);

Far lower power draw than a bulb;

Much less generated heat – preserving the window life;

Replaces A7079B24, MS25338-7079 and WA7079B24 bulbs;

Vibration resistant;

Operation temperatures: -55C to +70C degrees;

3 year warranty;

Part Number: 7310045-000;

PMA: PQ4159CE, Supplement Number: 24

PWI is the OEM for most King Air interior lighting, extending a decades-long history of OEM fluorescent lights for business jets from Dassault Falcon, Gulfstream, Citation and Learjet. New FAA-approved LED aviation upgrades can be purchased direct or through our growing

authorized dealer and distribution network. For more information, contact PWI at +1-316-942-2811 or contact sales, at sales@pwi-e.com.
