B300/350

EXTERIOR UPGRADE

The PWI Entry Door LED brings long life and serious ground illumination for all who enter and exit the King Air. It's hard to remember a flight fondly when a slip and fall occurs before a passenger even gets inside the cabin.

Flight crew and passengers will appreciate a well-lit ingress and egress to the aircraft. Everyone appreciates the attention to detail that adequate lighting produces.

It's the first thing they will see when boarding and the last thing when exiting. PWI's Entry Door LED sets the initial tone for the flight and then reinforces the positive flight experience when disembarking.

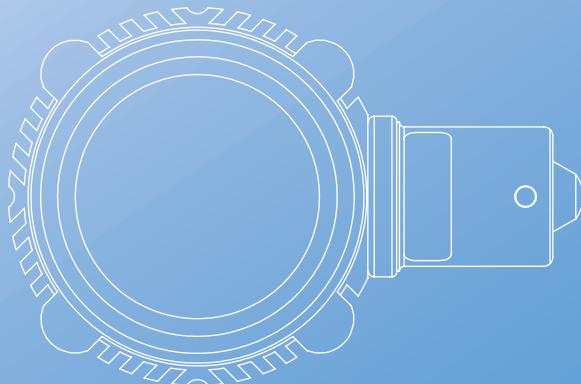

Replaces light MS24513-4174, M6363/3-1.

CERTIFICATIONS:

PMA - PQ4159CE; #22
